PROFESSIONAL SUMMARY

Data Analyst enthusiast proficient in SQL (PostgreSQL), Python, Power BI, Power Query, and DAX, with hands-on experience in analyzing datasets ranging from 255K to 3.1M+ records across finance, telecom, retail, and anti-money laundering (AML) domains. Skilled in data cleaning, exploratory data analysis, dashboard development, and transforming complex data into actionable business insights through interactive reporting and analytics solutions.

EDUCATION

Savitribai Phule Pune University

Nov 2022 – Jun 2026

Bachelor of Engineering – Artificial Intelligence and Data Science

Overall SGPA: 8.93 / 10.00

Maharashtra State Board

Jun 2021 – Mar 2022

Higher Secondary Certificate (HSC)

TECHNICAL SKILLS

- **Programming and Libraries:** Python, Pandas, NumPy, Matplotlib, Seaborn, OOP
- **Data Analysis:** Data Cleaning, EDA, Feature Engineering, Data Preprocessing, Data Validation
- **SQL Concepts:** JOINS, CTEs, Window Functions, Views, Subqueries, Aggregations
- **Databases and Data Warehouses:** PostgreSQL, Snowflake
- **BI and Visualization:** Power BI, DAX, Advanced Excel, Power Query, Data Modeling, KPI Dashboards
- **Statistical Techniques:** Hypothesis Testing, A/B Testing, Confidence Intervals, Regression Analysis, Correlation
- **Tools & Platforms:** Git, GitHub, Jupyter Notebook, Streamlit, Google Colab, Power BI Service

PROJECTS

CreditLens – Credit Risk Analysis

Python — Power BI — Pandas — Seaborn — NumPy

- Built an end-to-end credit risk analytics solution using 255K+ loan records to identify major drivers of borrower default.
- Conducted EDA, data preprocessing, and feature engineering on borrower income, credit score, DTI, and loan attributes, identifying credit scores below 580 and DTI above 40% as the strongest predictors of default.
- Developed an interactive Power BI dashboard with borrower risk segmentation, default trends, and key risk KPIs using DAX and Power Query.

Sentinel AML – Anti-Money Laundering Dashboard

PostgreSQL — DAX — Power BI — Pandas

- Scrutinized 3.1M+ financial transactions in PostgreSQL to uncover suspicious transfers, 138K high-value transactions, and 41K+ currency mismatches.
- Built a 2-page Power BI dashboard featuring risk scoring, transaction trends, bank-wise analysis, currency mismatch tracking, and interactive filtering using 8+ DAX and Power Query.
- Published the dashboard to Power BI Service, enabling cloud-based access and interactive reporting.

Customer Retention Analytics

Python — Numpy — Power BI — Pandas

- Queried and examined 7K+ telecom customer records using PostgreSQL, leveraging JOINS, CTEs, Window Functions, and aggregations to generate churn insights.
- Created 6+ DAX measures and Power Query transformations to calculate retention KPIs and customer behavior metrics.
- Designed an appealing and interactive Power BI dashboard featuring churn trends, customer segmentation, and retention analytics.

EXPERIENCE

Data Science Intern – Rajavi Technology Pvt. Ltd.

Dec 2024 – Jan 2025

- Performed exploratory data analysis on 180K+ supply chain records to identify high-performing products, regional sales trends, and delivery bottlenecks.
- Developed 5+ DAX measures and performed Power Query transformations to build KPI-driven reports for sales, profit, delivery performance, and customer analytics.

ACHIEVEMENTS

- Selected for the **Women in Engineering (WIE) Program** conducted by **Shikshana Foundation** in collaboration with the **AMADEUS** team.
- **Runner-up** at the **ISDM Code4Change Hackathon** for contributing to a data-driven solution aimed at enhancing the National Judicial Data Grid (NJDG) through analytics and machine learning-driven insights.
